AMMISETTY KAVYA

Vijayawada, India | ammisetty-kavya@hcltech.com| +91-8309348486

PROFESSIONAL SUMMARY

Java Developer with 1 year of experience in backend application development using Java, Spring Boot, RESTful APIs, and MySQL. Familiar with developing backend services using Spring Boot, JPA, Hibernate , implementing application security using Spring Security and JWT authentication, and understanding Microservices architecture and system integration. Knowledgeable in API design, backend application development, and the use of Generative AI tools and prompt engineering to support coding, debugging, and solution design.

TECHNICAL SKILLS

- Programming Languages: Java (Java 8)
- Backend Technologies: Spring Boot
- Architecture: REST APIs, Microservices
- Database: MySQL, H2 In-Memory Database, PostgreSQL
- Tools & Build Technologies: Git, Maven, VS Code, Swagger UI
- Generative AI & Productivity Tools: Prompt Engineering, ChatGPT, GitHub Copilot

PROFESSIONAL EXPERIENCE

Software Engineer – HCL Technologies | June 2025 – Present

- Developed backend functionality using Java and Spring Boot to support application requirements.
- Designed and implemented RESTful APIs using controller, service, repository, and DTO layers.
- Implemented business logic, input validations, and exception handling to improve code maintainability.
- Worked with database integration using SQL and supported data operations for backend services.
- Used Swagger for API documentation and testing, where applicable.
- Leveraged AI-assisted development tools, including ChatGPT, to support coding, debugging, and solution development.
- Participated in application development, testing, debugging, and maintenance to improve software quality.

PROJECTS

Library Management Application – Spring Boot Backend Project

- Developed backend functionality for a Library Management Application using Java, Spring Boot, and PostgreSQL.
- Designed and implemented RESTful APIs to manage books, user information, and library operations.
- Implemented user authentication, role-based access control, and security mechanisms to protect application resources.
- Developed book search and upload functionalities to support efficient book management.
- Implemented book availability tracking, purchase, and return functionalities to manage book transactions.
- Integrated PostgreSQL for storing and retrieving book, user, and transaction-related data.
- Used Maven for dependency management and build automation, and Git for version control and source code management.
- Participated in backend development, debugging, and testing to support reliable API functionality.

RailPharma – Medicine Delivery Website

- Developed a medicine delivery website focused on helping railway passengers access emergency medicines during train journeys.
- Implemented functionality to submit medicine requests and capture essential details for request processing.
- Developed request-handling features to support coordination between passengers and medicine delivery providers.
- Designed a user-friendly interface to simplify medicine requests and improve the overall user experience.
- Supported the medicine request and delivery coordination workflow to help passengers access medicines during emergencies.

CERTIFICATIONS

- Generative AI with Java Developer
- Java Full Stack
- Prompt Engineering Certification

EDUCATION

Bachelor of Technology (B.Tech) – KKR & KSR Institute of Technology and Sciences (JNTUK),
2021 – 2025 | 89%
